

Getting started with Github

Prerequisite:

- Check teams, a Github classroom link is provided in the assignment description
- Follow the link and login/sign up for github
 - You will automatically be added to classroom
 - A repository with the starter code will be automatically created for you
- Install Git - <https://git-scm.com/downloads>

Assignment - 0

Due February 7, 2023 11:59 PM

Points
30 points possible

Instructions

Follow link to clone Github repository.
<https://classroom.github.com/a/SvenghWa>

Note you do not have to upload any code or submit anything on teams. All submissions are accepted only via Github.

Reference materials

Assignment - 0.pdf

Student work

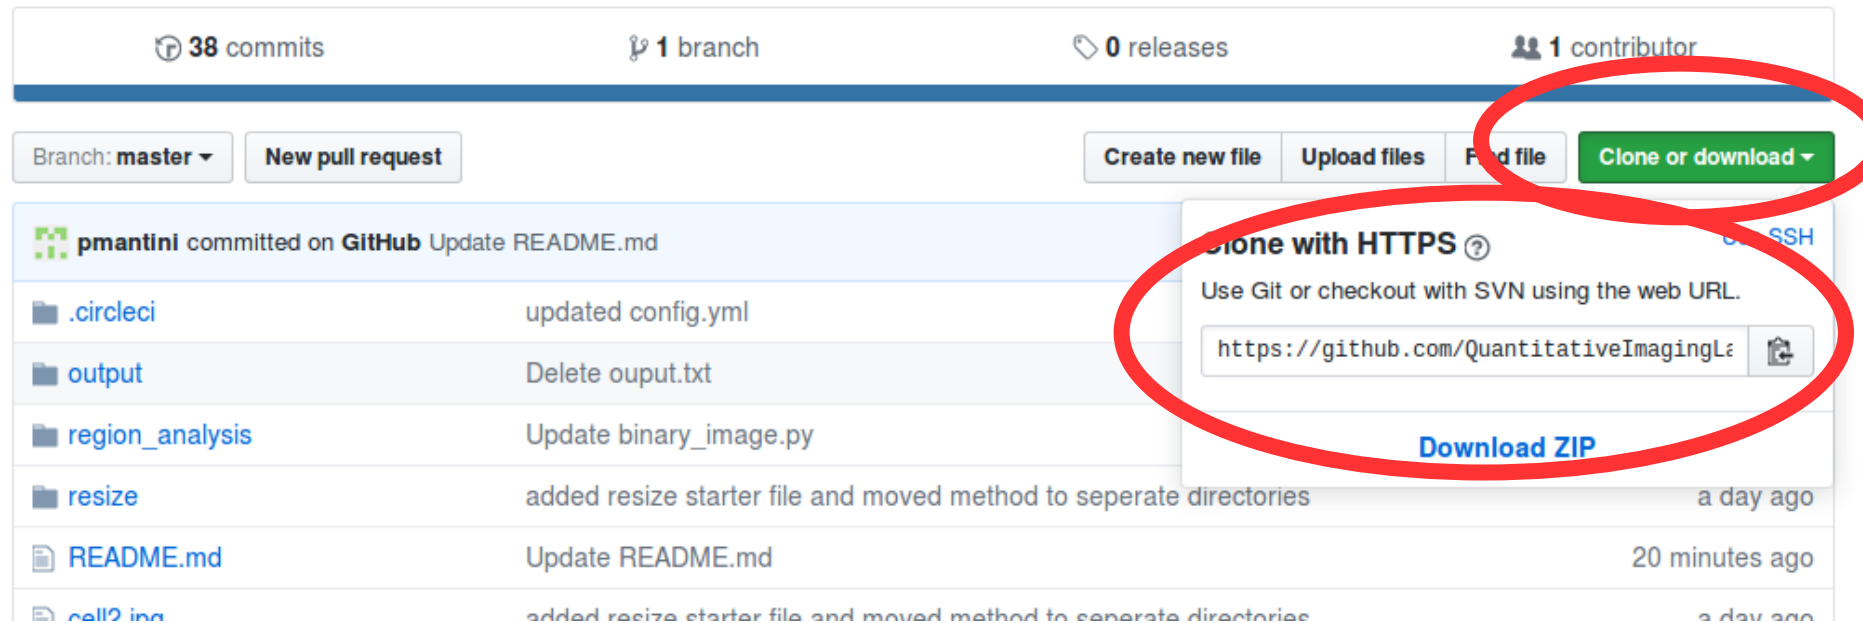

None

Steps

1. Checkout Code (pull from github repo)
2. Write Code
3. Commit changes
4. Push (to github repo)

Checkout Starter Code

- Login to Github and goto <> code
- Click clone or download
- Copy URL (yourURL)

The screenshot shows a GitHub repository page for a user named 'pmantini'. The repository has 38 commits, 1 branch, 0 releases, and 1 contributor. The current branch is 'master'. A green button labeled 'Clone or download' is circled in red. Below this button, a dropdown menu is open, showing the 'Clone with HTTPS' option, which is also circled in red. The URL for cloning is 'https://github.com/QuantitativeImagingLe'. Other options in the dropdown include 'Download ZIP' and 'SSH'. The repository's commit history is visible below the dropdown, showing updates to files like '.circleci', 'output', 'region_analysis', 'resize', and 'README.md'.

38 commits 1 branch 0 releases 1 contributor

Branch: master New pull request Create new file Upload files Find file Clone or download

pmantini committed on GitHub Update README.md

File	Commit Message	Time
.circleci	updated config.yml	
output	Delete output.txt	
region_analysis	Update binary_image.py	
resize	added resize starter file and moved method to separate directories	a day ago
README.md	Update README.md	20 minutes ago
cell2 img	added resize starter file and moved method to separate directories	a day ago

Checkout Starter Code

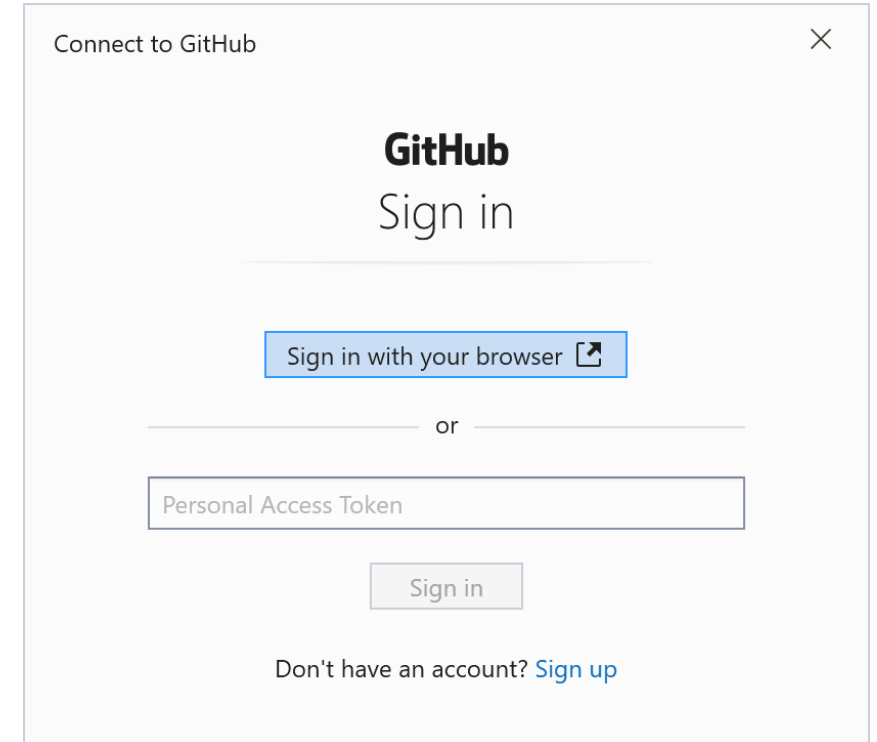

- Goto terminal or command prompt
- Create a local folder
- Initialize git with command:
 - > git init
- Add a remote repository
 - > git remote add <repo_name> <yourURL>
 - Repo_name can be anything (eg: diphw0)
- Pull or checkout starter code
 - > git pull <repo_name> main
- Enter your github credentials
- This should create a local copy

Authentication (git version: 2.33.0)

Either
Sign in with your browser
(Or)
Create PAT (Personal Access
Token

1. <https://docs.github.com/en/github/authenticating-to-github/keeping-your-account-and-data-secure/creating-a-personal-access-token>
2. Copy paste the token

The details will be stored in windows credentials

A screenshot of a 'Connect to GitHub' dialog box. The dialog has a title bar with 'Connect to GitHub' and a close button. The main content area has the GitHub logo and 'Sign in' text. Below this is a horizontal line, followed by a button labeled 'Sign in with your browser' with an external link icon. Another horizontal line follows, with the word 'or' in the center. Below that is a text input field labeled 'Personal Access Token'. Underneath the input field is a 'Sign in' button. At the bottom, there is a link that says 'Don't have an account? Sign up'.

Git older version and Linux based OS users

1. Please note that **github does not support password authentication anymore.**

2. If you are using an older version or linux based system.

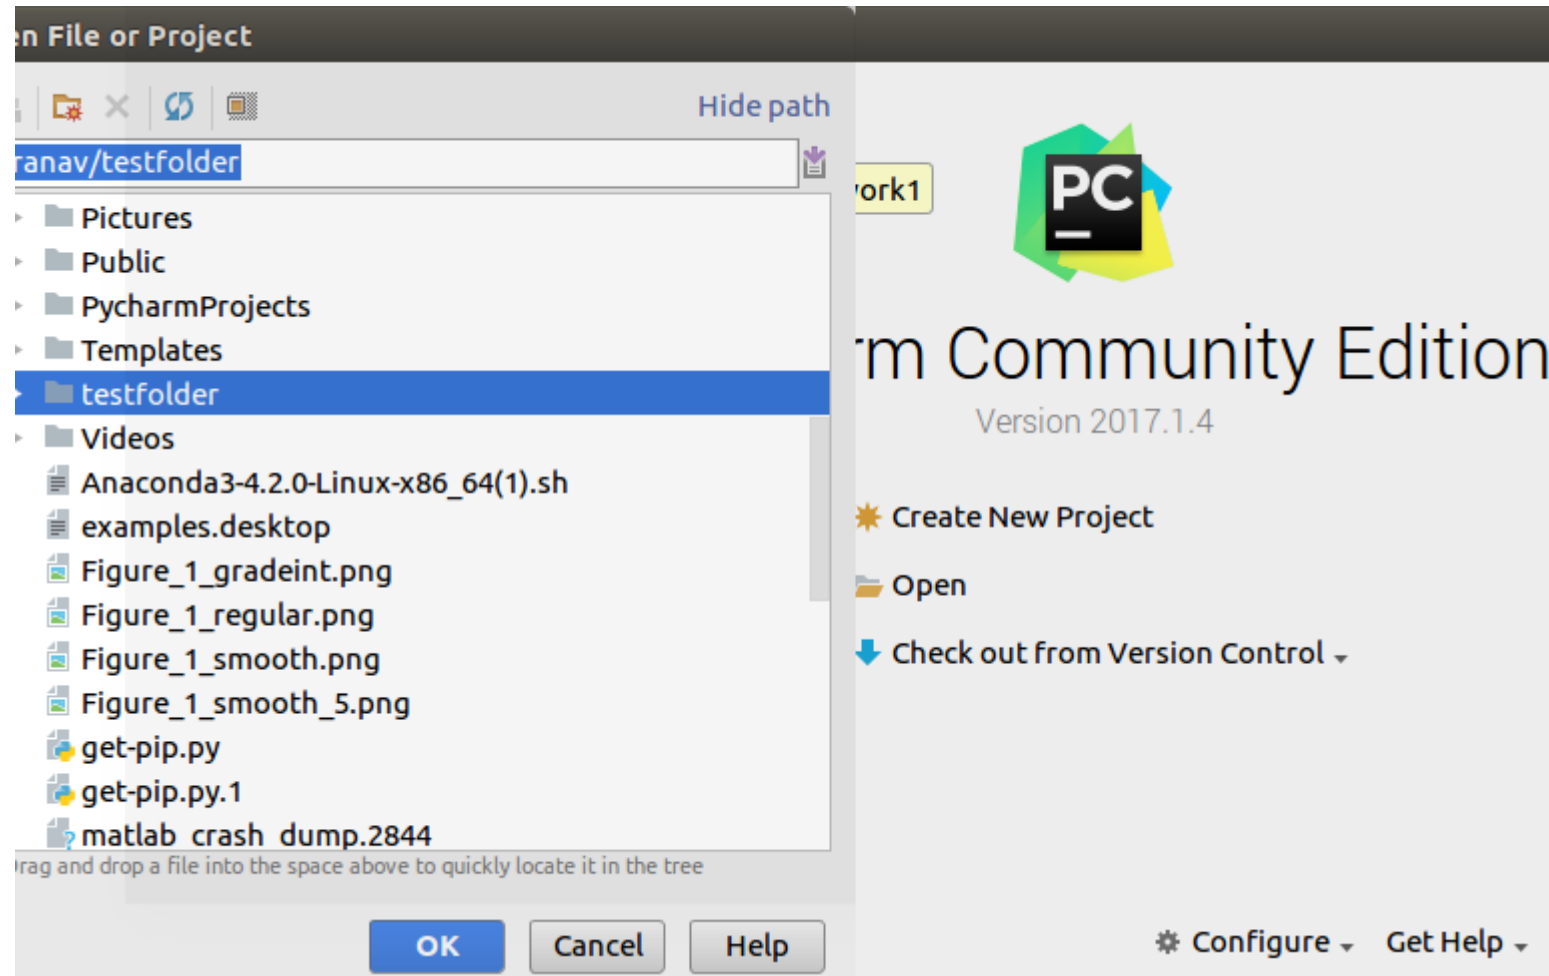

1. When asked for credentials in command line
 1. Username: same as github username
 2. Password: **Use the generated token** instead of github password

Checkout Starter Code

```
pranav@pranav-M11x-R2:~$ mkdir testfolder
pranav@pranav-M11x-R2:~$ cd testfolder/
pranav@pranav-M11x-R2:~/testfolder$ git init
Initialized empty Git repository in /home/pranav/testfolder/.git/
pranav@pranav-M11x-R2:~/testfolder$ git remote add dipAsgn1 https://github.com/QuantitativeImagingLaboratory/Homework-1.git
pranav@pranav-M11x-R2:~/testfolder$ git pull dipAsgn1 master
Username for 'https://github.com': m_pranav@yahoo.com
Password for 'https://m_pranav@yahoo.com@github.com':

 * branch            master       -> FETCH_HEAD
 * [new branch]      master       -> dipAsgn1/master
pranav@pranav-M11x-R2:~/testfolder$ █
```

Write code

- Open this folder with Pycharm

Commit changes

- Commit your local code.
- > git commit -am "message"
- Commit as often as possible
- This will allow stepwise versions, in case you have to revert to previous version of code

Push

- Push you local changes back to Github
- > git push <repo_name> master
- Enter your github credentials (Older git versions and Linux based users)

General Instructions

- You can add new files to the code using
- `> git add <filename>`
- In general push your code everytime you are done working
- You can follow the same procedure every time you want to continue work.
- Remember to pull your code before you start working, even though you already have the code in you directory. This will merge any changes at Github with your code. It will not over write your code.
- In-general use pull every time you start working and push code everytime you are done working
